*A.M. Kuthu*

*Dr. D. Malik*

**RASHTRASANT TUKADOJI MAHARAJ NAGPUR UNIVERSITY, NAGPUR**  
**FOUR YEAR BACHELOR OF TECHNOLOGY (B.TECH.) DEGREE COURSE**

**SEMESTER: SEVENTH**

**BRANCH: COMPUTER SCIENCE AND ENGINEERING**

|                   |                                   |             |                |                  |              |
|-------------------|-----------------------------------|-------------|----------------|------------------|--------------|
| Subject:          | Cryptography and Network Security |             |                | Subject Code     | BTECHCSE701T |
| Load              | Credit                            | Total Marks | Internal Marks | University Marks | Total        |
| 03Hrs<br>(Theory) | 03                                | 100         | 30             | 70               | 100          |

**Aim:** To highlight the features of different technologies involved in Network Security.

**Prerequisite(s):** Mathematics, Algorithm, Networking

**Course Objective:**

|   |  |
|---|--|
| 1 | To develop the student's ability to understand the concept of security goals in various applications.                              |
| 2 | To provide the students with some fundamental cryptographic mathematics used in various symmetric and asymmetric key cryptography. |
| 3 | To develop the student's ability to analyze the cryptographic algorithms.  |
| 4 | To familiarize the student the need of security in computer networks.  |

**Course Outcome:**

At the end of this course student are able to:

|     |  |
|-----|--|
| CO1 | Acquire knowledge about security goals, background of cryptographic mathematics and identification of its application  |
| CO2 | Understand, analyze and implement – the symmetric key algorithm  |
| CO3 | Acquire knowledge about the background of mathematics of asymmetric key cryptography and understand and analyze – asymmetric key encryption algorithms, digital signatures |
| CO4 | Analyze the concept of message integrity and the algorithms for checking the integrity of data.  |
| CO5 | Understand and analyze the existing cryptosystem used in networking  |

*Dr. Anand Thakur*

*Dr. Anand Thakur*

*Dr. Anand Thakur*

**UNIT I:**

**(08 Hrs)**

**Introduction :** Security goals, cryptographic attacks. Mathematics of cryptography: modular arithmetic, Euclidean and extended Euclidean algorithm. Traditional symmetric key ciphers; Monoalphabetic ciphers: addition and multiplication ciphers, Polyalphabetic ciphers: Vigenere's ciphers, Hill ciphers, playfair ciphers.

**UNIT II:**

**(07 Hrs)**

**Symmetric key cryptography:** Block ciphers and its components, Stream cipher, Blowfish, DES, AES, RC4, Key distribution

**UNIT III:**

**(07 Hrs)**

**Asymmetric key cryptography:** Euler's Phi-Function, Fermat's Little Theorem, Euler's theorem, Chinese remainder theorem. Diffie-Hellman, RSA, ECC, Entity authentication Digital signature

**UNIT IV:**

**(07 Hrs)**

**Message Integrity and authentication:** Authentication requirement, MAC, HMAC. Cryptographic Hash Function: MD5, SHA, User authentication, Kerberos

**UNIT V:**

**(07 Hrs)**

**Network Security:** Key Management, PGP, IPsec, SSL, Firewalls, Intrusion Detection, Password management, Virus, Virtual Private Network. Web Security

**Textbooks:**

- William Stallings, "Cryptography and Network Security: Principles and Standards", Prentice Hall India, 7th Edition, 2017.
- Behrouz A. Forouzan, "Cryptography and Network Security", McGraw-Hill publication, 2nd Edition, 2010.

**References:**

|                   |                           |             |                |                  |              |  |
|-------------------|---------------------------|-------------|----------------|------------------|--------------|--|
| Subject :         | Elective-IV Deep Learning |             |                | Subject Code :   | BTECHCSE702T |  |
| Load              | Credit                    | Total Marks | Internal Marks | University Marks | Total        |  |
| 03Hrs<br>(Theory) | 03                        | 100         | 30             | 70               | 100          |  |

**Course Objective:**

|   |   |
|---|---|
| 1 | To introduce basic deep learning algorithms.                                    |
| 2 | To understand real world problem which will be solved by deep learning methods. |
| 3 | To identify deep learning techniques suitable for a real world problem.         |

**Course Outcome:**

At the end of this course student are able to:

|     |   |
|-----|---|
| CO1 | Understand basic of deep learning algorithms.   |
| CO2 | Represent feedforward Neural Network  |
| CO3 | Evaluate the performance of different deep learning models with respect to the optimization, bias variance trade-off, overfitting and underfitting. |
| CO4 | Apply the convolution networks in context with real world problem solving.  |
| CO5 | Apply recurrent neural networks in context with real world problem solving.   |

**UNIT I**

(08 Hrs)

Basic of Deep Learning - History of Deep Learning, McCulloch Pitts Neuron, Thresholding Logic, Perceptrons, Perceptron Learning Algorithm and Convergence, Multilayer Perceptrons (MLPs), Representation Power of MLPs, Sigmoid Neurons, Feed forward Neural Networks.

**UNIT II**

(07 Hrs)

Training of feedforward Neural Network - Representation Power of Feed forward Neural Networks, Training of feed forward neural network, Gradient Descent, Gradient Descent (GD), Momentum Based GD, Nesterov Accelerated GD, Stochastic GD, AdaGrad, RMSProp, Adam.

**UNIT III**

(07 Hrs)

Optimization Algorithm - Gradient Descent (GD), Momentum Based GD, Nesterov Accelerated GD, Stochastic GD, AdaGrad, RMSProp, Adam, Activation Function and Initialization Methods: Sigmoid,

*Prasad*     *Ashish*     *Richa*     *Shruti*     *Prad*     *A*     *Abhi*

Tanh, Relu, Xavier and He initialization, Regularization: Bias and variance, Overfitting, Hyperparameters tuning, L1 and L2 regularization, Data Augmentation and early stopping, Parameter sharing and tying.

#### UNIT IV

(07 Hrs)

Convolution Neural Network (CNN) - Convolutional operation, Pooling, LeNet, AlexNet, ZF-Net, VGGNet, GoogLeNet, ResNet. Visualizing Convolutional Neural Networks, Guided Backpropagation.

#### UNIT V

(07 Hrs)

Recurrent Neural Network (RNN) - Recurrent Neural Networks, Backpropagation through Time (BPTT), Vanishing and Exploding Gradients, Long Short Term Memory (LSTM) Cells, Gated Recurrent Units (GRUs).

|                   |                                      |             |                |                            |       |
|-------------------|--------------------------------------|-------------|----------------|----------------------------|-------|
| Subject :         | Elective IV : Optimization Technique |             |                | Subject Code :BTECHCSE702T |       |
| Load              | Credit                               | Total Marks | Internal Marks | University Marks           | Total |
| 03Hrs<br>(Theory) | 03                                   | 100         | 30             | 70                         | 100   |

**Aim :** To understand the implementation of various data structures and algorithms.

**Prerequisite(s):** C Language

**Course Objective/Learning Objective:**

|   |   |
|---|---|
| 1 | Ability to apply the theory of optimization methods and algorithms to develop and for solving various types of optimization problems. |
| 2 | Ability to go in research by applying optimization techniques in problems of Engineering and Technology                               |

**Course Outcome:**

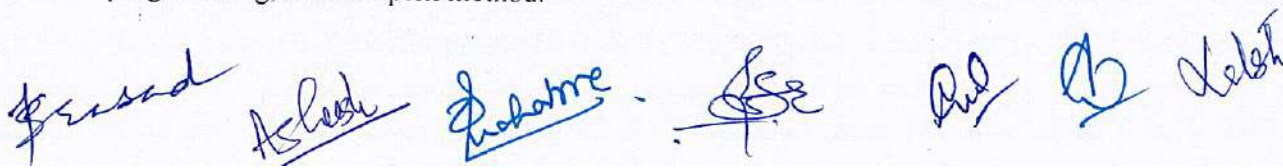

At the end of this course Student are able to:

|     |  |
|-----|--|
| CO1 | Explain the theoretical workings of the graphical, simplex and analytical methods for making effective decision on variables so as to optimize the objective function. |
| CO2 | Identify appropriate optimization method to solve complex problems involved in various industries.   |
| CO3 | Demonstrate the optimized material distribution schedule using transportation model to minimize total distribution cost.   |
| CO4 | Identify appropriate equipment replacement technique to be adopted to minimize maintenance cost by eliminating equipment break-down.                                   |
| CO5 | Apply the knowledge of game theory concepts to articulate real-world competitive situations to identify strategic decisions to counter the consequences.               |

**UNIT I:**

(08 Hrs)

**Introduction of operation research:** LP Formulations, Graphical method for solving LP's with 2 variables, Simplex method, Duality theory in linear programming and applications, Integer linear programming, dual simplex method.

**UNIT II:****(07 Hrs)**

**Dynamic Programming :** Basic Concepts, Bellman's optimality principles, Dynamics Programming approach in decision making problems, optimal subdivision problem.

**Sequencing Models:** Sequencing problem, Johnson's Algorithm for processing n jobs through 2 machines, Algorithm for processing n jobs through 3 or more machines, Processing 2 jobs through n machines.

**UNIT III:****(07 Hrs)**

**Project Management :** PERT and CPM : Project management origin and use of PERT. origin and use of CPM, Applications of PERT and CPM, Project Network, Diagram representation, Critical path calculation by network analysis and critical path method (CPM), Determination of floats, Construction of time chart and resource labelling, Project cost curve and crashing in project management, Project Evaluation and review Technique (PERT)

**UNIT IV:****(07 Hrs)**

**Queuing Models :** Essential features of queuing systems, operating characteristics of queuing system. probability distribution in queuing systems, classification of queuing models, solution of queuing  $M/M/1$ :  $\infty/FCFS, M/M/1 : N/FCFS, M/M/S : \infty/FCFS, M/M/S : N/FCFS$ .

**UNIT V:****(07 Hrs)**

**Inventory Models :** Introduction to the inventory problem, Deterministic Models, The classical EOQ (Economic Order Quantity) model, Inventory models with deterministic demands (no shortage & shortage allowed), Inventory models with probabilistic demand, multi item determines models

**Textbooks:**

|--------------------|-----------------------------------|-------------|----------------|----------------------------|-------|
| Subject :          | Elective IV : Gaming Architecture |             |                | Subject Code :BTECHCSE702T |       |
| Load               | Credit                            | Total Marks | Internal Marks | University Marks           | Total |
| 03 Hrs<br>(Theory) | 03                                | 100         | 30             | 70                         | 100   |

**Aim :** To understand the concepts of Gaming Architecture

**Prerequisite(s):**

**Course Objective/Learning Objective:**

|   |   |
|---|---|
| 1 | Understand the concepts of Game design and development.                                 |
| 2 | Learn the processes, mechanics and issues in Game Design.                               |
| 3 | Be exposed to the Core architectures of Game Programming.                               |
| 4 | Know about Game programming platforms, frame works and engines. Learn to develop games. |

**Course Outcome:**

At the end of this course Student are able to:

|     |   |
|-----|---|
| CO1 | Discuss the concepts of Game design and development.          |
| CO2 | Design the processes, and use mechanics for game development. |
| CO3 | Explain the Core architectures of Game Programming.           |
| CO4 | Use Game programming platforms, frame works and engines.      |
| CO5 | Create interactive Games.                                     |

**UNIT I:**

**3D GRAPHICS FOR GAME PROGRAMMING**

(08)

3D Transformations, Quaternions, 3D Modeling and Rendering, Ray Tracing, Shader Models, Lighting, Color, Texturing, Camera and Projections, Culling and Clipping, Character Animation, Physics-based Simulation, Scene Graphs.

**UNIT II:**

**GAME ENGINE DESIGN**

(07)

Game engine architecture, Engine support systems, Resources and File systems, Game loop and real-time simulation, Human Interface devices, Collision and rigid body dynamics, Game profiling.

**UNIT III:**

**GAME PROGRAMMING**

(07)

Application layer, Game logic, Game views, managing memory, controlling the main loop, loading and caching game data, User Interface management, Game event management.

*Prasad Ashish Pradip J. S. S. S. S. S. S.*

**UNIT IV:**

(07)

**GAMING PLATFORMS AND FRAMEWORKS**

2D and 3D Game development using Flash, DirectX, Java, Python, Game engines - Unity, DX Studio, Development: The Development Process. Code Quality. Coding Priorities. Debugging and Module Completion. The Seven Golden Gambits. The Three Lead Balloons.

Initialization and the Main Loop: Initializing Game objects ,Game Loop, Cleanup.

**UNIT V:**

(07)

Loading and Caching Game Resources: Image and Audio Formats, Compression Resource, Files Resource File builder, Resource Cache, 3D Graphics and 3D Engines: 3D Graphics Pipeline, 3D Middleware

**Game and Development:** Developing 2D and 3D interactive games using DirectX or Python – Isometric and Tile Based Games, Puzzle games, Single Player games, Multi Player games.

Introduction to Augmented and Virtual Reality in game development.

**RASHTRASANT TUKADOJI MAHARAJ NAGPUR UNIVERSITY, NAGPUR**  
**FOUR YEAR BACHELOR OF TECHNOLOGY (B.Tech.) DEGREE COURSE**

**SEMESTER: SEVENTH (C.B.C.S.)**

**BRANCH: Computer Science & Engineering**

|                    |                                     |             |                |                             |       |
|--------------------|-------------------------------------|-------------|----------------|-----------------------------|-------|
| Subject :          | Elective IV : Salesforce Technology |             |                | Subject Code : BTECHCSE702T |       |
| Load               | Credit                              | Total Marks | Internal Marks | University Marks            | Total |
| 03 Hrs<br>(Theory) | 03                                  | 100         | 30             | 70                          | 100   |

**Aim:** To provide a comprehensive understanding of the Salesforce platform, its core features, and its various components.

**Prerequisite:** OOPS (Object Oriented Programming) or any programming language

**Course Objectives:**

|    |  |
|----|--|
| 1. | To make learn how to create and customize objects, fields, and records; building workflows and automation processes.   |
| 2. | To learn designing and managing reports and dashboards; and utilizing the Salesforce AppExchange.                      |
| 3. | To provide knowledge and hands-on experience in programming using Apex (Salesforce's proprietary programming language) |

**Course Outcome:**

At the end of this course students are able to:

|     |   |
|-----|---|
| CO1 | Develop skills in configuring and managing Salesforce orgs.                       |
| CO2 | Understanding Salesforce Data Management:   |
| CO3 | Implementing automation, security and debugging data.                             |
| CO4 | Acquire programming skills in Apex, Salesforce's programming language.            |
| CO5 | Enable to extend and customize Salesforce to meet specific business requirements. |

*Prasad Acharya Subhane P.S.S. P.S. P.S. P.S.*

|                    |  |             |                |                            |       |
|--------------------|--|-------------|----------------|----------------------------|-------|
| Subject :          | Elective V : Natural Language Processing |             |                | Subject Code :BTECHCSE703T |       |
| Load               | Credit                                   | Total Marks | Internal Marks | University Marks           | Total |
| 03 Hrs<br>(Theory) | 03                                       | 100         | 30             | 70                         | 100   |

**Prerequisite(s):**

**Course Objective/Learning Objective:**

|   |  |
|---|--|
| 1 | To introduce the basic concepts and applications of Natural Language Processing (NLP)  |
| 2 | To provide an understanding of the challenges in NLP and their solutions   |
| 3 | To teach the different techniques and algorithms used in NLP, such as text classification, information retrieval and extraction, syntactic and semantic analysis, and deep learning models |
| 4 | To enable students to analyze text data and build NLP models   |
| 5 | To equip students with the skills to evaluate and compare different NLP techniques and algorithms  |

**Course Outcome:**

At the end of this course Student are able to:

|     |  |
|-----|--|
| CO1 | Understand the basic concepts and applications of Natural Language Processing (NLP)  |
| CO2 | Identify the challenges in NLP and evaluate the solutions to these challenges  |
| CO3 | Analyze and preprocess text data for NLP tasks   |
| CO4 | Apply different NLP techniques and algorithms such as text classification, information retrieval and extraction, syntactic and semantic analysis, and deep learning models |
| CO5 | Evaluate and compare different NLP techniques and algorithms using appropriate metrics   |

**UNIT I:**

(08Hrs)

**Introduction to NLP:** Definition and scope of NLP, Historical overview and applications of NLP, Challenges in NLP and their solutions, Basic concepts in linguistics and language processing, Text preprocessing and normalization

**UNIT II:**

(07 Hrs)

**Language Models and Text Classification:** Language modeling and n-gram models, Classification and categorization of text data, Text classification algorithms such as Naive Bayes, Decision Trees, and Support Vector Machines (SVM), Evaluation measures for text classification.

**UNIT III:**

(07 Hrs)

**Information Retrieval and Extraction:** Information retrieval models such as vector space model and probabilistic model, Retrieval of relevant documents using query expansion, Named Entity Recognition (NER), Relation Extraction and Open Information Extraction (OIE)

**UNIT IV:**

(07 Hrs)

**Syntactic and Semantic Analysis:** Parts of Speech (POS) tagging and parsing, Dependency Parsing, Semantic Analysis and Sentiment Analysis, Word Embeddings and Semantic Similarity

**UNIT V:**

(07 Hrs)

**Advanced Topics in NLP:** Neural Network models for NLP tasks . Deep-Learning models for NLP tasks. Natural Language Generation (NLG), Dialogue Systems and Chatbots

**Textbooks:**

- "Speech and Language Processing" by Daniel Jurafsky and James H. Martin
- "Natural Language Processing" by Jacob Eisenstein

**References:**

- "Foundations of Statistical Natural Language Processing" by Christopher D. Manning and Hinrich Schütze
- "Natural Language Processing with Python" by Steven Bird, Ewan Klein, and Edward Loper

**RASHTRASANT TUKADOJI MAHARAJ NAGPUR UNIVERSITY, NAGPUR**  
**FOUR YEAR BACHELOR OF TECHNOLOGY (B.TECH.) DEGREE COURSE**

**SEMESTER: SEVENTH (C.B.C.S.)**

**BRANCH: COMPUTER SCIENCE & ENGINEERING**

| Subject :         | Elective V : Big Data Analytics |             |                | Subject Code :BTECHCSE703T |       |
|-------------------|---------------------------------|-------------|----------------|----------------------------|-------|
| Load              | Credit                          | Total Marks | Internal Marks | University Marks           | Total |
| 03Hrs<br>(Theory) | 03                              | 100         | 30             | 70                         | 100   |

**Pre- requisites :** Should have knowledge of Programming Language (Java preferably). Practice of SQL (queries and sub queries), exposure to Linux Environment.

**Course Objective/Learning Objective:**

|   |   |
|---|---|
| 1 | Student should able to learn and understand the basic concept, characteristics and application of Big Data. |
| 2 | To learn Concept of Distributed system with Apache Hadoop.  |
| 3 | To learn application of Hadoop to solve real world problem  |

**Course Outcome:**

At the end of this course Student are able to:

|     |  |
|-----|--|
| CO1 | Understand Concept, characteristics, types of big data                         |
| CO2 | Build and maintain reliable, scalable, distributed systems with Apache Hadoop. |
| CO3 | Apply Hadoop ecosystem components to solve real world problems.                |
| CO4 | Apply machine learning algorithm for big data analysis.                        |
| CO5 | Implement Big Data Activities using Hive                                       |

**UNIT I :**

**(08 Hrs)**

Introduction to Big Data: Data, Characteristics of data and Types of digital data: Unstructured, Semi-structured and Structured, Sources of data, working with unstructured data, Evolution and Definition of big data, Characteristics and Need of big data, Challenges of big data, Data environment versus big data environment, Big Data Analysis Life Cycle.

**UNIT II :**

**(07 Hrs)**

Big data analytics tools and Technologies: Overview of business intelligence, Characteristics and need of big data analytics, Classification of analytics, Challenges to big data analytics. Analytical operations: Associations rules, classifications, clustering, Mahout ML, etc.

**UNIT III :****(07 Hrs)**

Hadoop foundation for analytics: Features, Hadoop ecosystems, Evolution of Hadoop architectures Hadoop 1.0, Hadoop 2.0, Hadoop3.0, Key aspects and Components of Hadoop 3.0. Hadoop Technology Stack: Hive, Pig, Zookeeper, Swoop, oozie, flume, etc.

**Unit IV :****(07 Hrs)**

MapReduce and YARN framework: Introduction to MapReduce, Processing data with MapReduce, Introduction to YARN, Components YARN, Data serialization and Working with common serialization formats, Big data serialization formats

**UNIT V :****(07 Hrs)**

NoSQL Databases: Schema-less Models, Increasing Flexibility for Data Manipulation Key Value Stores- Document Stores – Tabular Stores – Object Data Stores Hive – Sharding –Hbase – Analyzing big data NoSQL Database Architectures.

**Pre-requisites :** Computer Networks.

**Course Objective/Learning Objective:**

|   |  |
|---|--|
| 1 | To study Wireless Communication with Cellular system Model.                |
| 2 | To study GSM system with Radio, Network Switching and Operation subsystem. |
| 3 | To learn Wireless LAN with MAC Layer.                                      |
| 4 | To study Mobile MANET with WAP protocol.                                   |

**Course Outcome:**

At the end of this course Student are able :

|     |  |
|-----|--|
| CO1 | To Understand the basic concepts of Wireless Communication with Cellular system.                         |
| CO2 | To learn about GSM System with Cell layout, Radio, Network Switching and Operation subsystem, HLR & VLR. |
| CO3 | To learn Wireless LAN with its Architecture and MAC Layer.   |
| CO4 | To learn Mobile IP, Dynamic Host Configuration Protocol, Mobile Ad hoc Networks.                         |
| CO5 | To learn about TCP over Wireless Networks. with Wireless Application protocol.                           |

**UNIT I :**

**(08 Hrs)**

Introduction to Mobile Computing, Features of Wireless Communication, Applications of Wireless Communication, A simplified Reference Model in Mobile Computing, Cellular system Infrastructure with generic Block diagram, frequency reuse, Medium Access Control (Wireless): Motivation for a specialized MAC, Hidden and exposed terminals, near and far terminals,  
 Network over Wired Network. Wireless

**UNIT II :**

**(07 Hrs)**

Introduction to GSM system: Mobile Services, GSM Architecture, GSM operational and technical requirements. Cell layout and frequency planning, GSM radio subsystem, Network and Switching

*Prasad Ashish Dhanraj [Signature] [Signature] [Signature] [Signature]*

Subsystem, Operation subsystem. Echo canceller, Localization and calling, Handovers.

**UNIT III :**

**(07 Hrs)**

Wireless LAN: Advantages of Wireless LAN, Applications, IEEE 802.11 standards, system Architecture, protocol architecture, physical layer, medium access control layer, MAC management, Mobile Agents, Requirement for mobile agent system, Bluetooth, Roaming.

**UNIT IV :**

**(07 Hrs)**

Mobile Network Layer: Mobile IP-IP Packet delivery, Dynamic Host Configuration Protocol (DHCP), Mobile Ad hoc Networks (MANETs): Overview. Properties of a MANET, routing, DSDV, DSR, AODV & Hybrid Routing Protocol

**UNIT V :**

**(07 Hrs)**

Mobile Transport Layer: Traditional TCP, Indirect TCP, Snooping TCP, Selective retransmission, Transaction oriented TCP, Wireless Application Protocol (WAP), Architecture, Wireless datagram protocol.

**Text Books :**

**Prerequisite(s):** C Language

**Course Objective/Learning Objective:**

|   |  |
|---|--|
| 1 | To understand the fundamentals of Python programming language.   |
| 2 | To develop problem-solving and programming skills using Python.  |
| 3 | To use Python in different applications such as web development, data analysis, and artificial intelligence. |

**Course Outcome:**

At the end of this course, Student are able to:

|     |   |
|-----|---|
| CO1 | Develop programming skills in Python programming language.    |
| CO2 | Implement object-oriented programming concepts using Python.  |
| CO3 | Utilize Python libraries for data analysis and visualization. |
| CO4 | Develop web applications using Flask framework.               |
| CO5 | Apply machine learning concepts using Scikit-Learn.           |

**UNIT I:**

(08 Hrs)

**Introduction to Python Programming:** Overview of Python programming language, Variables, data types, and operators, Conditional statements and loops, Functions, and modules

**UNIT II:**

(07 Hrs)

**Object-Oriented Programming in Python:** Object-oriented programming concepts, Classes, objects, and methods, Inheritance, and polymorphism

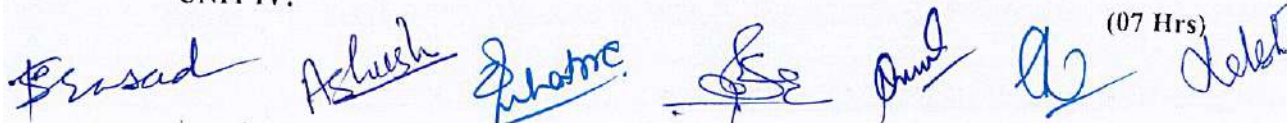

**UNIT III:**

(07 Hrs)

**Python Libraries for Data Analysis:** Introduction to NumPy and Pandas, Data manipulation with NumPy and Pandas, Data visualization with Matplotlib and Seaborn.

**UNIT IV:**

(07 Hrs)

**Web Development with Flask:** Introduction to Flask framework, creating web applications using Flask, Flask extensions for database integration

**UNIT V:**

**(07 Hrs)**

**Introduction to Machine Learning with Python:** Introduction to Scikit-Learn, Supervised and unsupervised learning, Classification, and regression algorithms

**Prerequisite(s):** C Language

**Course Objective/Learning Objective:**

|   |   |
|---|---|
| 1 | To introduce the concepts of Java programming language and its application in software development.   |
| 2 | To develop a sound understanding of Java programming constructs such as variables, operators, control statements, loops, and arrays.                    |
| 3 | To provide students with a strong foundation in object-oriented programming concepts such as inheritance, polymorphism, encapsulation, and abstraction. |
| 4 | To enable students to create and use classes, objects, and methods in Java programs.  |
| 5 | To teach students how to handle exceptions and use various input/output techniques in Java programs.  |

**Course Outcome:**

At the end of this course Student are able to:

|     |   |
|-----|---|
| CO1 | Understand the fundamentals of Java programming language and its application in software development.                           |
| CO2 | Implement Java programming constructs such as variables, operators, control statements, loops, and arrays.                      |
| CO3 | Design and implement object-oriented programs using inheritance, polymorphism, encapsulation, and abstraction concepts in Java. |
| CO4 | Create and use classes, objects, and methods in Java programs.  |
| CO5 | Handle exceptions and use input/output techniques in Java programs.   |

**UNIT I:**

**(08 Hrs)**

**Introduction to Java Programming:** Introduction to Java programming language

Java Virtual Machine (JVM), Java Development Kit (JDK), Overview of Java programming environment, Simple Java program and its execution

*Prasad Ashish Subhamee [Signature] and A2 Akshat*

**UNIT II:**

**(07 Hrs)**

**Java Programming Constructs:** Variables and data types, Operators, and expressions

Control statements: if-else, switch, for, while, do-while, Arrays: single-dimensional and multi-dimensional arrays, Strings and string manipulation

**UNIT III:**

**(07 Hrs)**

**Object-Oriented Programming Concepts in Java:** Classes and objects, Methods and constructors, Inheritance: single and multilevel inheritance, Polymorphism: method overloading and overriding, Encapsulation and abstraction

**UNIT IV:**

**(07 Hrs)**

**Handling Exceptions in Java:** Exception handling: try-catch, throw, throws, Exception hierarchy in Java, Checked and unchecked exceptions, Creating custom exceptions

**UNIT V:**

**(07 Hrs)**

**Input/Output Techniques in Java:** File handling in Java, Reading and writing data using streams, Serialization and deserialization, Networking programming in Java: sockets and URLs

**Textbooks:**

**RASHTRASANT TUKADOJI MAHARAJ NAGPUR UNIVERSITY, NAGPUR**  
**FOUR YEAR BACHELOR OF TECHNOLOGY (B.TECH.) DEGREE COURSE**  
**SEMESTER: SEVENTH (C.B.C.S.)**  
**BRANCH: COMPUTER SCIENCE AND ENGINEERING**

|                    |   |             |                |                            |       |
|--------------------|---|-------------|----------------|----------------------------|-------|
| Subject            | Open Elective II : Basics of Database Management System |             |                | Subject Code :BTECHCSE704T |       |
| Load               | Credit  | Total Marks | Internal Marks | University Marks           | Total |
| 03 Hrs<br>(Theory) | 03  | 100         | 30             | 70                         | 100   |

**Aim: To understand basic concepts of Database Management System.**

**Prerequisite(s): NIL**

**Course Objective/Learning Objective:**

|    |   |
|----|---|
| 1. | To introduce a general idea of a database management system.                          |
| 2. | To develop skills to implement real life applications that involve database handling. |
| 3. | To provide opportunities in subject areas of data handling and managing techniques    |

**Course Outcome:**

**At the end of this course Student are able to:**

|     |  |
|-----|--|
| CO1 | Understand the basics of DBMS to analyze an information problem in the form of an Entity relation diagram and design an appropriate data model for it. |
| CO2 | Demonstrate basics of File organizations and its types   |
| CO3 | Interpret functional dependencies and various normalization forms  |
| CO4 | Perform basic transaction processing and management  |
| CO5 | Demonstrate SQL queries to perform CRUD (Create, Retrieve, Update, Delete) operations on database  |

*Prasad Aklesh Anantare* *SS* *And* *Ab* *Abhi*

**UNIT I:**

**(08 Hrs)**

**Introduction to DBMS** - Purpose of Database Systems, Database systems Applications, view of data, Database Languages, Database system structure, data methods, Database Design, & ER Model : Entity, Attributes, Relationships, Constraints, Keys, Design Process, ER Models, E-R Diagram.

**UNIT II:**

**(07 Hrs)**

**File organizations** and its types, indexing, types of indexing, hashing, hashing techniques.

**UNIT III:**

**(07 Hrs)**

**Functional Dependency (FD)** – data integrity rules, functional dependency, need of normalization, first normal form, second normal form, third normal form

**UNIT IV:**

**(07 Hrs)**

**Database Transaction Processing** : transaction system concepts, desirable properties (ACID) of transactions, schedules, serializability of schedules, concurrency control, recoverability and Deadlock handling.

**UNIT V:**

**(07 Hrs)**

**SQL Concepts** - Basics of SQL, DDL, DML, DCL, structure – creation, alteration, defining constraints, Functions - aggregate functions, Built-in functions – numeric, date, string functions, set operations, Use of group by, having, order by, join and its types, Exist, Any, All

**Textbooks:**

\*\* Industry Project/Project: Students are encouraged to complete this project in industry and one co guide should be assigned from institute. Rigorous monitoring and mid semester at least two progress to be monitored.

\*Program Electives VI & VII can be opted from NPTEL/MOOCs. Final examination will be conducted by RTMNU.

**Program Elective-VI**

1. Social Networks
2. Reinforcement Learning
3. GPU Architectures and Programming

**Program Elective-VII**

1. Predictive Analytics - Regression and Classification
2. Blockchain and its Applications
3. Computer Vision

*Prasad (P.S. PRASAD)*  
*Prabhu (K.P. mahabru)*

*A.M. Kuttu*

*ABShing*  
*Delet Dr. Malik*  
*Ashish (Ashish Sharma)*  
*Dr. Sathyanarayanan*

**Subject : Social Networks**

**Subject Code : BTCME801.1T**

| Load              | Credit | Total Marks | Internal Marks | University Marks | Total |
|-------------------|--------|-------------|----------------|------------------|-------|
| 03Hrs<br>(Theory) | 03     | 100         | 30             | 70               | 100   |

**Aim :** To understand social networks and use of tools for social network analysis.

**Prerequisite(s):** Discrete Mathematics

**Course Objectives:**

|   |   |
|---|---|
| 1 | To understand highly interconnected and highly complex social network |
| 2 | To represent connected social networks in form of graph               |
| 3 | To apply graph theory, sociology, game theory                         |
| 4 | To use tools and extract statistics from social networks              |

**Course Outcomes:**

At the end of this course Student are able to:

|     |   |
|-----|---|
| CO1 | Learn social networks , its types and representation                          |
| CO2 | Understand weak ties, strong and weak relationships , homophily and calculate |
| CO3 | Analyse links   |
| CO4 | Understand Power Laws and Rich-Get-Richer Phenomena                           |
| CO5 | Understand Small World Phenomenon   |

Week 1: Introduction

Week 2: Handling Real-world Network Datasets

Week 3: Strength of Weak Ties

Week 4: Strong and Weak Relationships (Continued) & Homophily

Week 5: Homophily Continued and +Ve / -Ve Relationships

Week 6: Link Analysis

Week 7: Cascading Behavior in Networks

Week 8: Link Analysis (Continued)

Week 9: Power Laws and Rich-Get-Richer Phenomena

Week 10: Power law (contd..) and Epidemics

Week 11: Small World Phenomenon

Week 12: Pseudocode (How to go viral on web)

**Subject: Reinforcement Learning**

**Subject Code: BTCME801.2T**

| Load              | Credit | Total Marks | Internal Marks | University Marks | Total |
|-------------------|--------|-------------|----------------|------------------|-------|
| 03Hrs<br>(Theory) | 03     | 100         | 30             | 70               | 100   |

**Aim :** The goal of the course is to introduce the basic mathematical foundations of reinforcement learning, as well as highlight some of the recent directions of research.

**Prerequisite(s):** Neural Networks

**Course Objectives:**

|   |   |
|---|---|
| 1 | It aims to model the trial-and-error learning process that is needed in many problem situations where explicit instructive signals are not available. |
| 2 | It has roots in operations research, behavioral psychology and AI.  |
| 3 | The goal of the course is to introduce the basic mathematical foundations of reinforcement learning.  |
| 4 | It highlight some of the recent directions of research  |

**Course Outcomes:**

At the end of this course Student are able to:

|     |   |
|-----|---|
| CO1 | Understand Bandit algorithm and its mathematical formulation. |
| CO2 | Use dynamic programming for reinforcement learning            |
| CO3 | Perform function approximation and apply LSM                  |
| CO4 | Fit Q, DQN & Policy Gradient for Full RL                      |
| CO5 | Use combinatorial models for complex problems                 |

**Week 1** Introduction

**Week 2** Bandit algorithms – UCB, PAC

**Week 3** Bandit algorithms –Median Elimination, Policy Gradient

**Week 4** Full RL & MDPs

**Week 5** Bellman Optimality

**Week 6** Dynamic Programming & TD Methods

**Week 7** Eligibility Traces

**Week 8** Function Approximation

**Week 9** Least Squares Methods

**Week 10** Fitted Q, DQN & Policy Gradient for Full RL

**Week 11** Hierarchical RL

**Week 12** POMDPs

**Subject: GPU Architecture and Programming**      **Subject Code : BTCME801.3T**

| Load              | Credit | Total Marks | Internal Marks | University Marks | Total |
|-------------------|--------|-------------|----------------|------------------|-------|
| 03Hrs<br>(Theory) | 03     | 100         | 30             | 70               | 100   |

**Aim :** To understand GPU architecture basics in terms of functional units and then dive into the popular CUDA programming model commonly used for GPU programming.

**Prerequisite(s):** Programming and Data Structure, Digital Logic, Computer architecture

**Course Objectives:**

|   |  |
|---|--|
| 1 | To introduce basics of conventional CPU architectures, their extensions for single instruction multiple data processing (SIMD) |
| 2 | To understand concept in the form of single instruction multiple thread processing (SIMT) as is done in modern GPUs.           |
| 3 | To teach architecture specific details   |
| 4 | To introduce different architecture-aware optimization techniques relevant to both CUDA and OpenCL                             |

**Course Outcome:**

At the end of this course Student are able to:

|     |  |
|-----|--|
| CO1 | Understand conventional CPU architectures, their extensions for single instruction multiple data processing (SIMD) |
| CO2 | Program in CUDA about data space & synchronization   |
| CO3 | Apply optimization on kernals, treads etc  |
| CO4 | Learn basics of OpenCL   |
| CO5 | Design an application using neural networks  |

Week 1: Review of Traditional Computer Architecture – Basic five stage RISC Pipeline, Cache Memory, Register File, SIMD instructions

Week 2: GPU architectures - Streaming Multi Processors, Cache Hierarchy, The Graphics Pipeline

Week 3: Introduction to CUDA programming

Week 4: Multi-dimensional mapping of dataspace, Synchronization

Week 5: Warp Scheduling, Divergence

Week 6: Memory Access Coalescing

Week 7: Optimization examples: optimizing Reduction Kernels

Week 8: Optimization examples: Kernel Fusion, Thread and Block Coarsening

Week 9: OpenCL basics

Week 10: CPU GPU Program Partitioning

Week 11: Application Design: Efficient Neural Network Training/Inferencing

Week 12: Application Design: Efficient Neural Network Training/Inferencing, cont'd

3. Heterogeneous Computing with OpenCL” -- Benedict Gaster, Lee Howes, David R. Kaeli

**Subject : Predictive Analytics - Regression and Classification Subject Code : BTCME802.1T**

| Load              | Credit | Total Marks | Internal Marks | University Marks | Total |
|-------------------|--------|-------------|----------------|------------------|-------|
| 03Hrs<br>(Theory) | 03     | 100         | 30             | 70               | 100   |

**Aim :** The course will provide an overview of fundamental ideas in statistical **predictive** models.

**Prerequisite(s):** Probability and Statistics

**Course Objectives:**

|   |   |
|---|---|
| 1 | The course will provide an overview of fundamental ideas in statistical predictive models |
| 2 | . The objective is to understand how statistical models handle prediction problems.       |
| 3 | The stress will be on understanding the construction of the models and implementation.    |
| 4 | It is a core course if students aspire to be Data Scientists.                             |

**Course Outcomes:**

At the end of this course Student are able to:

|     |  |
|-----|--|
| CO1 | To understand predictive models, LSM, Normal equations and GMT     |
| CO2 | Understand regression models and infer its statistical inference   |
| CO3 | Check model assumptions and bias variance tradeoff.                |
| CO4 | Perform regression analysis in various programming languages       |
| CO5 | Apply regression models and classification for predictive analysis |

**Week 1:**

- Landscape of the predictive models.
- Least Squares method

**Week 2:**

- Normal Equations:
- Gauss Markov theorem

**Week 3:**

- The geometry of Regression Model and Feature Engineering
- Statistical Inference of Regression Coefficient

**Week 4:**

- Checking Model Assumptions
- Model Comparison with R-squared, RMSE, AIC or BIC

**Week 5:**

- Model Complexity and Bias-Variance tradeoff
- Feature selection and Dimension Reduction

**Week 6:**

- Multicollinearity and Variance Inflation Factor
- Regularization with LASSO, Ridge and Elastic Net
- Ridge Regression with Python

*Debet*

*Debet*

*Ashish*

*Debet*

*Arvind*

**Week 7:**

- Regression Analysis with Python
- Regression Analysis with R
- Regression Analysis with Julia

**Week 8: Major Applications of Regression Models**

- Capital Asset Pricing Model
- Bootstrap Regression
- Time Series Forecasting with Regression Model
- Granger Causal model.

**Week 9:**

- Logistic Regression
- MLE of coefficient of Logistic Regression

**Week 10:**

- Fit Logistic Regression with optim function in R
- Fit Logistic Regression with glm function in R
- Fit Logistic Regression with sklearn in Python
- Fit Logistic Regression in Julia

**Week 11:**

- Logistic Regression and Inference
- Discriminant Analysis

**Week 12:**

- Multinomial Logit Regression
- Generalised Linear Regression
- Poisson Regression
- Negative Binomial Regression

**Subject : Data Analytics using Python**

**Subject Code: BTCME802.2T**

| Load               | Credit | Total Marks | Internal Marks | University Marks | Total |
|--------------------|--------|-------------|----------------|------------------|-------|
| 03 Hrs<br>(Theory) | 03     | 100         | 30             | 70               | 100   |

**Aim :** To give hands-on experience using python for creating analytics models

**Prerequisite(s):** Nil

**Course Objectives:**

|   |  |
|---|--|
| 1 | To learn analytics using python programming language |
| 2 | Learn hypothesis testing and ANOVA model             |
| 3 | Regression models and its implementation             |
| 4 | Learn clustering and classification                  |

**Course Outcomes:**

At the end of this course student are able to:

|     |  |
|-----|--|
| CO1 | Understand data analytics and Python fundamentals                                |
| CO2 | Perform sampling using various methods and perform hypothesis test or ANOVA test |
| CO3 | Fit linear regression model and calculate various errors                         |
| CO4 | Apply ROC  |
| CO5 | Apply clustering and classification using python programming                     |

Week 1: Introduction to data analytics and Python fundamentals

Week 2: Introduction to probability

Week 3: Sampling and sampling distributions

Week 4: Hypothesis testing

Week 5: Two sample testing and introduction to ANOVA

Week 6: Two way ANOVA and linear regression

Week 7: Linear regression and multiple regressions

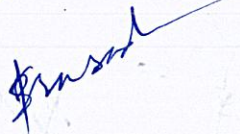

Week 8: Concepts of MLE and Logistic regression

Week 9: ROC and Regression Analysis Model Building

Week 10:  $\chi^2$  Test and introduction to cluster analysis

Week 11: Clustering analysis

Week 12: Classification and Regression Trees (CART)

**Subject: Cloud Computing**

**Subject Code : BTCME802.3T**

| Load               | Credit | Total Marks | Internal Marks | University Marks | Total |
|--------------------|--------|-------------|----------------|------------------|-------|
| 03 Hrs<br>(Theory) | 03     | 100         | 30             | 70               | 100   |

**Aim :** This will help students to use and explore the cloud computing platforms.

**Prerequisite(s):** Basics of Computer Architecture and Organization, Networking

**Course Objectives:**

|   |  |
|---|--|
| 1 | This course will introduce various aspects of cloud computing.                               |
| 2 | Learn cloud fundamentals, management issues, security challenges and future research trends. |
| 3 | VM resource management and cloud fog edge enabled analytics                                  |
| 4 | Teach case studies and advanced research areas   |

**Course Outcomes:**

At the end of this course Student are able to:

|     |  |
|-----|--|
| CO1 | Understand on-demand computing service for shared pool of resources, namely servers, storage, networking, software, database, applications etc.,   |
| CO2 | Understand cloud model for enabling ubiquitous, on-demand access to a shared pool of configurable computing resources, which can be rapidly provisioned and released with minimal management effort. |
| CO3 | Create a cloud and use cloud simulator softwares   |
| CO4 | Perform VM resource management and cloud fog edge enabled analytics.   |
| CO5 | Practice case studies and understand advanced research areas   |

**Week 1:** Introduction to Cloud Computing

**Week 2:** Cloud Computing Architecture

**Week 3:** Service Management in Cloud Computing

**Week 4:** Data Management in Cloud Computing

**Week 5:** Resource Management in Cloud

**Week 6:** Cloud Security
